APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
10/533,039	12/14/2005	Matti Lares	043965/291577	5873
826	7590	09/10/2008	EXAMINER	
ALSTON & BIRD LLP BANK OF AMERICA PLAZA 101 SOUTH TRYON STREET, SUITE 4000 CHARLOTTE, NC 28280-4000			FORTUNA, JOSE A	
ART UNIT	PAPER NUMBER	1791		
MAIL DATE	DELIVERY MODE	09/10/2008 PAPER		

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/533,039	<b>Applicant(s)</b> LARES ET AL.
	<b>Examiner</b> José A. Fortuna	<b>Art Unit</b> 1791

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED. (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 14 December 2005.
- 2a) This action is FINAL.      2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1-11 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 28 April 2005 is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All    b) Some \* c) None of:
1. Certified copies of the priority documents have been received.
  2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO-166/08)  
Paper No(s)/Mail Date 04/28/05
- 4) Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) Notice of Informal Patent Application
- 6) Other: \_\_\_\_\_

## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-11 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-14 of copending Application No. 10/533,038; claims 1-14 of copending application 10/533,004 and claims 1-13 of copending application 10/533,225. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims overlap in scope. With regard to the copending application 10/533,038, the claims are drawn to the same product as claimed, but with clear overlapping on the properties. As to the others copending applications, they claim boards that are within the scope of the present application and with overlapping, if not the same, claimed properties.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

***Claim Objections***

3. Claim 1 is objected to because of the following informalities: the units of the bulk seem to be inconsistent with the specification, i.e., the specification indicates, see for example page 8, bulk between 1.15-1.3 cm<sup>3</sup>/g, and the claims recite the same range, but with other units, i.e. m<sup>3</sup>/kg, which has a conversion factor of 10<sup>-3</sup>, (1 cm<sup>3</sup>/g = 10<sup>-3</sup> m<sup>3</sup>/kg). Appropriate correction is required.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mohan et al., in either US Patent No. 6,287,424 or 6,497,790, (since both specifications are very similar, only the 6,287,424 would be discussed) in view of Honkalampi et al., US Patent No. 6,164,198.

Mohan et al., in both inventions, teach a coated multilayer board, which is heat calendered to improve its surface, see abstract. They teach the use of an extended nip calendering operation, see for example figure 9, and column 8, line 60 through column 9, line 27, and teach that the board can be further calendered after the paper is passed through the belted nip so to control caliper, column 9, line 38 through column 10, line 15. Mohan et al. teach also that the surface of the board is usually treated/coated at the drying section, i.e., sized and/or coated, before the calendering operation, see column 4, lines 21-36. Mohan et al. do not teach the calendering with the claimed calendering device, nor the properties of the board as claimed. However, Honkalampi et al. teach the same device as claimed, see figures and abstract,

Honkalampi et al. also teach the advantages of using such device, i.e., enables open and closing of the nip during operation without the risk of destroying the jacket due to overheating or damaging the flexible jacket, which results in cost savings and less down time; also the tension of flexible jacket in an axial direction may be adjusted in axial

direction, reducing the wear and tear of the jacket; produces a paper web which is has good stiffness, etc., see column 2, lines 32-56, reproduced below for applicant's convenience:

The advantages of the present invention are several. The drive arrangement according to the invention enables opening and closing of the nip during operation without the risk 35 of destroying the jacket due to overheating or damaging the flexible jacket, which results in cost savings and less downtime of the machine. Furthermore since the force from the drive arrangement interacts with the end walls of the enclosed shoe roll, and both end walls are rotated at the same 40 rotational speed, the flexible jacket will not be negatively affected by the driving of the enclosed shoe roll, neither by wear on the jacket surface nor by tensional forces which otherwise might occur in the jacket itself. Moreover, by the 45 possibility of axially displacing one end wall, the tension of the flexible jacket in an axial direction may be adjusted during operation, and thereby reducing the wear of the jacket due to local stress of the jacket in different directions.

Accordingly, the invention provides a new and improved 50 method and apparatus for producing paper or paperboard, which also after calendering thereof has a good stiffness, thanks to the arrangements which provides for sufficient heat transfer also at very high speed of the fiber web such that the 55 surface of the web will be plasticized and given an even surface by the use of a moderate pressure without suppressing the porous structure of the core of the fiber web.

Therefore, substituting the calendering of the primary reference, Mohan et al., with the calendering device taught by secondary reference, Honkalampi et al., would have been obvious to one of ordinary skill in the art in order to obtain the advantages discussed above, i.e., better paper by improved stiffness and surface properties. As to the claimed surface properties, the combination of references would produce a paper with the claimed properties or at the very least it would have been obvious to one of ordinary skill in the art to optimize the variables to desired range. Note that Mohan et al. teach that the

claimed properties are recognized result effective variables and it has been held that “[T]he discovery of an optimum value of a result effective variable in a known process is ordinarily within the skill of the art. *In re Antoine*, 559 F.2d 618, 195 USPQ 6 (CCPA 1977); *In re Aller*, 42 CCPA 824, 220 F.2d 454, 105 USPQ 233 (1995).

***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure in the art of "Board calendering."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to José A. Fortuna whose telephone number is 571-272-1188. The examiner can normally be reached on 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven P. Griffin can be reached on 571-272-1189. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
